List of Proprietary Substances and Nonfood Compounds

Authorized for use under USDA Inspection and Grading Programs

NOV 30 '92
ACQ/SERIALS BRANCH

The LIST OF PROPRIETARY SUBSTANCES AND NONFOOD COMPOUNDS AUTHORIZED FOR USE UNDER USDA INSPECTION AND GRADING PROGRAMS is revised annually, with an update issued once between annual editions.

If you wish to be notified when new editions and supplements are issued, write to the following address and ask to be put on mailing N-504:

List of Proprietary Substances and Nonfood Compounds Authorized for use under USDA Inspection and Grading Programs

Listings Effective as of January 31, 1992

INTRODUCTION

This publication lists proprietary substances used in the preparation of product and nonfood compounds used in the plant environment which are authorized by Product Assessment Division (PAD), Regulatory Programs, Food Safety and Inspection Service (FSIS), for use in slaughtering and processing plants operating under the U.S. Department of Agriculture poultry, meat, rabbit, shell egg grading, and egg products inspection programs. Authorized substances and compounds are separated into a two-part listing. Part I includes substances used in the preparation of meat, poultry, and rabbit products. Part II lists nonfood compounds used in the plant environment.

The U.S. Department of Commerce, National Marine Fisheries Service, recognizes this publication as an official list of nonfood compounds accepted for use in plants operating under the U.S. Department of Commerce, Fishery Products Inspection Program.

THIS LIST IS EFFECTIVE AS OF JANUARY 31, 1992

Proprietary substances and compounds authorized by letters from the PAD after issue of this publication are also acceptable.

Definitions

1. The term "substance used in the preparation of product" means any substance the intended use of which results or may reasonably be expected to result, directly or indirectly, in its becoming a component or otherwise affecting the characteristics of any meat, poultry, or rabbit product produced under FSIS inspection.

2. The term "nonfood compound" means any agent proposed for use in a federally inspected plant but not expected to become a component of a meat, poultry, rabbit, or egg product.

3. The term "proprietary" refers to any substance or compound all of the ingredients of which are not listed by common or chemical name on the containers or other means by which the substance or compound is identified.

4. The term "generic" refers to any substance or compound which is not proprietary as that word is defined in this publication.

Substances and Compounds Which Require Evaluation

Listed Substances and Compounds

Proprietary substances classified in the categories described in Part I and nonfood compounds classified in the categories described in Part II of this publication require evaluation by PAD prior to use in plants operating under the USDA poultry, meat, rabbit, shell egg grading, and egg products inspection programs. Letters indicating acceptability of the substances and compounds are issued to suppliers by PAD. Copies of the letters must be supplied to Federal inspectors as proof of authorization until the substances and compounds appear in the subsequent revision of this publication. Unless otherwise stated on pages I-iv and II-viii of this publication, once a substance or compound appears in the publication, the letters are no longer valid as proof of authorization.

Unlisted Compounds

Paints and some other types of nonfood compounds also require chemical acceptance by PAD, but are not categorized in this publication. Letters indicating continuing chemical acceptability are issued to suppliers by PAD. Copies of such letters must be supplied at all times to Federal inspectors as proof of authorization, since the compounds cannot be listed in this publication. Such letters remain valid as proof of authorization until revoked by PAD. The final granting of authorization to use such compounds which do not come in direct or indirect contact with edible products or packaging materials is the responsibility of the Inspector in Charge at the official plant. Technical assistance will be provided by PAD upon request.

Packaging Materials and Other Resinous or Polymeric Materials Which May Be Evaluated

There is no requirement for prior approval by PAD for packaging materials or other resinous or polymeric materials such as aprons and gloves used in processing or handling meat and poultry. However, the Meat and Poultry Inspection Program may disallow the use of such materials if there is reason to doubt their chemical acceptability. PAD is responsible for evaluating the chemical acceptability of packaging materials and other resinous or polymeric materials used in processing meat and poultry that are questioned by the Program.

Procedures for Obtaining Acceptance

1. Antifoaming agents; marking agents; rendering agents; refining agents; release agents; denaturants; food processing chemicals such as scald media, tripe processing agents, and fruit and vegetable washing agents; and other proprietary substances used in the preparation of product unless otherwise stated on pages iv-vi of this publication.

Send requests for such evaluation to:

Compounds and Packaging Branch
Product Assessment Division
U.S. Department of Agriculture, FSIS
Building 306, BARC-East
Beltsville, MD 20705
Telephone: (301) 504-8566

Proprietary substances to be evaluated may be submitted by letter from the manufacturers of such substances. The letter must include:

a. The brand name or other means by which the substance is identified.

b. The complete chemical composition.

c. The intended use of the substance.

d. One label, stencil copy, or other means by which the substance is identified must accompany the letter. If the substance is intended as a hog scald agent, poultry scald agent, or tripe processing agent, the label must include a qualitative statement of ingredients.

When the manufacturer and distributor are not the same, the distributor must submit the following in addition to any information requested from the manufacturer:

a. A letter from the distributor relating his substance to that of the manufacturer.

b. One label or stencil copy of the substance as distributed by him. If the substance is intended as a hog scald agent, poultry scald agent, or tripe processing agent, the label must include a qualitative statement of ingredients.

2. Maintenance and cleaning chemicals; sanitizing and pesticide chemicals; shell egg cleaning, defoaming, destaining, and sanitizing compounds; structural or equipment coatings proposed for application on site in federally inspected plants; and other nonfood compounds unless otherwise stated on pages vi and vii of this publication.

Send requests for such evaluation to:

Compounds and Packaging Branch
Product Assessment Division
U.S. Department of Agriculture, FSIS
Building 306, BARC-East
Beltsville, MD 20705
Telephone: (301) 504-8566

All nonfood compounds to be evaluated by the Compounds and Packaging Branch must be submitted using the appropriate application form. A description of the forms and their use is provided in Section 4.1 of the "Guidelines For Obtaining Authorization of Compounds To Be Used in Meat and Poultry Plants." Obtain copies of the "Guidelines" and blank forms from the Compounds and Packaging Branch.

3. Packaging materials; coatings applied to equipment or structural members prior to installation in the plant; and all materials such as metal alloys, plastics, belting, hose, etc., proposed for use in association with processing facilities and equipment.

Send requests for such evaluation to:

Compounds and Packaging Branch
Product Assessment Division
U.S. Department of Agriculture, FSIS
Building 306, BARC-East
Beltsville, MD 20705
Telephone: (301) 504-8566

Application forms are not required for the above listed materials. Letters requesting evaluation of the materials must include:

a. The brand name or code designation by which the material is identified.

b. A description of the intended use for the material.

c. The complete chemical composition of the material.

4. Substances or compounds proposed for uses other than those previously specified.

The evaluation of such preparations is not the responsibility of PAD, nor can it be performed by that Division.

Generic Substances Which Do Not Require Evaluation

The generic substances referred to in this section will not be listed in this publication. They may be used under the conditions described in the following paragraphs without being evaluated or authorized by PAD. All substances should be enclosed in sanitary containers bearing name and address of manufacturers or other qualifying phrase such as "manufactured for," "packed for," or "distributed by," if the substance is marketed by a firm other than the manufacturer. All substances listed in CFR Title 9, Sections 318.7(c)(4) and 381.147 and other non-meat or non-poultry items used in the preparation of products must be food grade types. They should be identified as "Food Grade" or "FCC" (Food Chemical Codex) on their containers, or be accompanied by a supplier's letter of guaranty. The guaranty is referenced in Part 18.20 of the Meat and Poultry Inspection Manual. All substances must be used in a manner which, in the opinion of the Inspector in Charge, will not result in the adulteration of food products.

1. Denaturants.

Denaturants formulated and labeled according to the following subparagraphs require no authorization by PAD prior to their designated use.

Preparations consisting only of the substances listed below may be used for denaturing carcasses, parts thereof, meat and meat food products (other than rendered animal fat) condemned for pathology and intended for disposal only as tankage. The denaturant must be deposited in all portions of the carcass or product to the extent necessary to prevent its use for food purposes. The container label must identify all ingredients present.

Crude carbolic acid Cresylic disinfectant	A formula consisting of: 1 part FD&C Green No. 3, 40 parts oil of citronella, 40 parts liquid detergent, and 40 parts water.

Preparations consisting only of the substances listed below may be used for denaturing carcasses, parts thereof, meat and meat food products intended for disposal for purposes other than human food. Preparations marketed as aqueous solutions may also contain chemical preservatives and/or emulsifying agents regulated under the Food Additive Regulations (CFR Title 21, Parts 172, 182 & 184). The denaturant must be deposited in all portions of the carcass or product to the extent necessary to prevent its use as human food. The container label must identify all ingredients present.

Charcoal (finely powdered) FD&C Blue No. 1	FD&C Blue No. 2 FD&C Green No. 3

Preparations consisting only of substances listed below may be used for denaturing poultry and poultry products condemned for pathology and intended for disposal only as tankage. The denaturant must be deposited in all portions of the carcass or product to the extent necessary to prevent its use for food purposes. The container label must identify all ingredients present.

Crude carbolic acid Fuel oil Kerosene Used crankcase oil	Phenolic disinfectants conforming to commercial standards CS 70-41 or CS 71-41

Preparations consisting only of substances listed below may be used for denaturing poultry and poultry products intended for disposal for purposes other than human food. Preparations marketed as aqueous solutions may also contain chemical preservatives and/or emulsifying agents regulated under the Food Additive Regulations (CFR Title 21, Parts 172, 182 & 184). The denaturant must be deposited in all portions of the carcass or product to the extent necessary to prevent its use as human food. The container label must identify all ingredients present.

FD&C Blue No. 1 FD&C Blue No. 2 FD&C Green No. 3	FD&C Red No. 3 FD&C Red No. 40 Ultramarine Blue

Denaturants including ingredients other than those listed in the preceding paragraphs, or those identified only by proprietary name, must be submitted to the Compounds and Packaging Branch for evaluation according to the procedures for obtaining authorization provided in this publication.

2. Refining Agents.

Refining agents formulated and labeled according to the following subparagraphs require no authorization by PAD prior to their designated use. Preparations consisting only of acetic acid or sodium bicarbonate (bicarbonate of soda) may be used to separate fatty acids and glycerol in rendered fats in amounts sufficient for purpose. The substances must be eliminated during the process of manufacturing. The container label must identify all ingredients present.

Preparations consisting only of the substances listed below may be used in refining animal fats in amounts sufficient for purpose. The substances must be eliminated during the process of manufacturing. The container label must identify all ingredients present.

Carbon (purified charcoal)	Caustic soda (sodium hydroxide)
Diatomaceous earth	Fuller's earth
Sodium carbonate	Tannic acid

3. Rendering Agents.

Preparations consisting only of tricalcium phosphate and/or trisodium phosphate may be used to aid in rendering animal fats in amounts sufficient for purpose without authorization by PAD. The container label must identify all ingredients present.

4. Antifoaming Agents.

Preparations consisting only of dimethylpolysiloxane (methyl polysilicone) may be used to retard foaming in soups and rendered fats (10 ppm) and curing pickle (50 ppm) without authorization by PAD. The container label must identify all ingredients present.

5. Anticoagulants, antioxidants, catalysts, coloring agents, curing accelerators, curing agents, emulsifying agents, flavoring agents, phosphates, proteolytic enzymes, artificial sweetners, and other miscellaneous substances the components of which are required to be disclosed on the labels of meat and poultry products may be used without evaluation by PAD. Such substances do not require authorization by PAD because all of their components must be listed on the container label before the substance can enter the plant.

Compounds Which Do Not Require Evaluation

The compounds referred to in this section will not be listed in this publication. They may be used under the conditions described in the following paragraphs without being evaluated or authorized by PAD. Compounds which are classified as economic poisons must be registered with the Registration Division, Office of Pesticide Programs, Environmental Protection Agency, Washington, DC 20460, and must be used according to label directions. All compounds governed by FDA regulations must be used in accordance with those regulations (21 CFR, Parts 170-189). All compounds must be used in a manner which, in the opinion of the Inspector in Charge, will not result in direct or indirect contamination of food products.

1. Outdoor pesticides.

Compounds such as herbicides, bird control compounds, and other pesticides labeled for outdoor use only may be used around the premises of federally inspected plants without authorization by PAD, provided that they are registered by the Registration Division, Office of Pesticide Programs, Environmental Protection Agency, Washington, DC 20460; and they are used in accordance with label directions and in a manner which prevents the direct or indirect contamination of food products.

2. Compounds used in offices and other similar nonprocessing areas.

Compounds such as dusting aids, furniture waxes or polishes, wall or floor finishes or waxes, rug or upholstery shampoos or cleaners, rug antistatic treatments, window or glass cleaners, and other similar compounds specifically designated by the Compounds and Packaging Branch require no authorization by PAD prior to use in such areas. They may not be used in any processing area of a federally inspected plant.

3. Compounds used in cafeterias or other retail food service areas.

Compounds such as rinse additives to prevent spotting and streaking of dishes and utensils, utensil tarnish removers, some hand dishwashing soaps or detergents, and other similar compounds specifically designated by the Compounds and Packaging Branch require no authorization by PAD prior to use in those areas. They may not be used in any processing area of a federally inspected plant.

4. Compounds used in heating systems.

Compounds such as fuel additives, firebox or flue treatments or cleaners, and other similar compounds specifically designated by the Compounds and Packaging Branch require no authorization by PAD prior to their intended use.

5. Compounds used in the treatment of certain inedible materials.

Compounds used to treat inedible materials such as hides, hair, feathers, or other similar materials specified by the Compounds and Packaging Branch require no evaluation or authorization by PAD prior to their intended use.

6. Compounds used in holding pens, trucks, transporting cages, etc.

Compounds such as pesticides, disinfectants, or cleaners used in transporting or holding facilities for animals prior to slaughter, or on animals being transported or held prior to slaughter; chemicals for deodorizing or dissolving animal waste; or other similar compounds specifically designated by the Compounds and Packaging Branch require no evaluation or authorization by PAD prior to their intended use.

7. Scouring pads, cloths, towels, etc.

Scouring pads, cloths, towels, and similar materials used for cleaning require no evaluation or authorization by PAD prior to use provided their performance is acceptable to the USDA Inspector in Charge at the point of use. They must be used in a manner which, in the opinion of the Inspector in Charge, will not result in direct and indirect contamination of food products. Cleaners that might be used in association with such materials must be evaluated and authorized before use.

8. Pest control devices.

Devices such as sticky boards, fly paper, insect electrocutors, light traps, bait boxes, and bait fountains may be used on the premises of federally inspected plants without evaluation or authorization by PAD. The performance of such devices is subject to the enforcement jurisdiction of the Environmental Protection Agency.

Compounds Which Are Not Applicable For Evaluation

None of the compounds referred to in this part may be used in a processing area of the plant. However, they may be used under the conditions described in the following paragraphs without being evaluated or authorized by PAD. They may be stored within the plant provided that such storage is in a designated nonprocessing area acceptable to the Inspector in Charge. Any such compounds which are classified as economic poisons must be registered with the Registration Division, Office of Pesticide Programs, Environmental Protection Agency, Washington, DC 20460, and must be used according to label directions. Any compounds governed by Food and Drug Administration regulations must be used in accordance with those regulations. All compounds must be used in a manner which, in the opinion of the Inspector in Charge, will not result in the direct or indirect contamination of products.

1. Compounds used in sewage or waste water systems outside of the plant.

Compounds such as grease solvents for traps or lines, sewage odor control compounds to maintain biological balance in sewage lagoons or holding ponds, or other similar compounds specifically designated by the Compounds and Packaging Branch.

2. Compounds used in cooling towers, evaporative condensers, or secondary cooling water loops.

Compounds such as corrosion inhibitors, algaecides, compounds for cleaning or maintaining the tower, condenser, or cooling loop, or other similar compounds specifically designated by the Compounds and Packaging Branch. Secondary cooling water loops are those where the water is used to cool gases or liquids that do not contact food product. An example of a secondary cooling loop is the cooling system used to condense hot ammonia gas in an ammonia chilling system.

3. Compounds used on the exterior of buildings or immediate surrounding areas.

Compounds such as exterior coatings; mortar cleaning or etching compounds; tar, asphalt, or mortar removers; driveway patching or finishing compounds; or other similar compounds specifically designated by the Compounds and Packaging Branch.

4. Compounds used for cleaning or maintenance of the exterior of vehicles. Compounds such as car washes or shampoos, tire cleaners, truck body brighteners, or other similar compounds specifically designated by the Compounds and Packaging Branch.

How To Use This List

The sequence of listing companies, and preparations within companies, as printed by the computer is as follows:

Preparations or companies having a special character (e.g., #, %, ") as the first character, are printed before any preparation or company having an alphabetic character (e.g., a, b, c) as the first character. For instance, in Part I under the heading of Oakite Products, Incorporated, #78 is listed before Fisan Det.

Preparations or companies having a numeric character (e.g., 1, 2, 3) as the first character are printed after all preparations or companies having an alphabetic character as the first character. For instance, in Part II under the heading of Alpha Chemical Services, Inc., 1016 is listed after WS9NP for that company. As another example, the listing for the company named 1st Ayd Corporation immediately follows the listing for Zurn Industries, Inc.

Because of the sorting sequence utilized by the computer, series of preparations which have numeric characters may not be printed in numeric order according to magnitude. The left-most digit of such preparations will primarily determine the sequence in which they are printed. For instance, in Part II under the heading of Alex C. Fergusson Company, Afco 4321 is printed before AFCO 52.

Please examine all listings carefully before concluding that a preparation or company is not listed.

Part I - Proprietary Substances Used in Preparation of Product

Part I
List of Proprietary Substances Used in the Preparation of Product

Category Code Letters And Their Meanings

The permissible use for each authorized substance is designated by the following code letters, and conditions for use are restricted by the category in which it is placed.

NOTE: In several categories, reference is made to the need for rinsing with potable water. PAD accepts water used in federally inspected plants as being potable when such certification is made by State health agency authorities.

1. SMOKE FLAVORING AGENTS

Prior-authorization by the Product Assessment Division is no longer required for natural or artificial smoke flavorings. Natural smoke flavorings (formerly category code 1A) and artificial smoke flavoring (formerly category code 1B) may be permitted for use in meat and poultry products without being listed in the "List of Proprietary Substances and Nonfood Compounds." The use of such flavorings is still subject to labeling requirements and other restrictions that apply to the use of any flavoring. Inspectors may use manufacturer's letters of quaranty as an indication of compliance with FDA requirements. All flavorings must be used in a manner which, in the opinion of the Inspector in Charge, will not result in the adulteration of food products.

2. MARKING AGENTS

2A. Branding inks.

Substances used to brand meat and poultry parts or carcasses.

2B. Tattoo inks.

Substances used to mark live animals for identification.

2C. Marking crayons.

Substances used to mark meat and poultry parts or carcasses.

3. FOOD PROCESSING SUBSTANCES

3A. Poultry scald agents.

Substances used for this purpose must be removed by subsequent cleaning operations and must be labeled in accordance with CFR Title 9, Section 381.145(h).

3B. Hog scald agents.

Substances used for this purpose must be removed by subsequent cleaning operations and must be labeled in accordance with CFR Title 9, Section 318.1(d).

3C. Tripe denuding, bleaching, and neutralizing agents.

Treatment must be followed by thorough rinsing with potable water to remove added substances. Substances must be labeled in accordance with CFR Title 9, Section 318.1(d).

3D. Substances for washing fruits and vegetables that are used as ingredients of meat, poultry, and rabbit products.

After using these substances, the fruits and vegetables must be thoroughly rinsed with potable water.

3E. Preflushing agents for casings.

After using these substances, the casings must be thoroughly rinsed with potable water.

3F. Refining agents for rendered fats.

These substances must be eliminated during process of manufacture.

3G. Rendering agents.

These substances may be used to aid in rendering animal fats.

3H. Release agents.

These substances may be used on grills, loaf pans, cutters, boning benches, chopping blocks or other hard surfaces to help prevent food from adhering during processing.

4. DENATURANTS

4A. Denaturants for meat.

Denaturants for carcasses, parts thereof, meat and meat food products (other than rendered animal fat) condemned for pathology and intended for disposal only as tankage. The denaturant must be deposited in all portions of the carcass or product to the extent necessary to prevent its use for food purposes.

4B. Denaturants for meat.

Denaturants for carcasses, parts thereof, meat and meat food products intended for disposal for purposes other than human food. The denaturant must be deposited in all portions of the carcass or product to the extent necessary to prevent its use for human food.

4C. Denaturants for poultry.

Denaturants for poultry carcasses, parts thereof, or poultry products condemned for pathology and intended for disposal only as tankage. The denaturants must be deposited in all portions of the carcass or product to the extent necessary to prevent its use for food purposes.

4D. Denaturants for poultry.

Denaturants for poultry carcasses, parts thereof, or poultry products intended for disposal for purposes other than human food. The denaturant must be deposited in all portions of the carcass or products to the extent necessary to prevent its use for food purposes.

5. SUBSTANCES REQUIRING LETTER INDICATING AUTHORIZED USE

5A. Substances to control foaming in soups, stews, rendered fats, and curing pickle.

5B. Substances for cleaning or treating feet or other edible parts.

5C. Miscellaneous.

Substances listed in this category are to be used in accordance with the conditions set forth in the letter of acceptance. Copies of the acceptance letter must be supplied to Federal inspectors as proof of the acceptable use(s) of the substance. These letters remain valid as long as the compound is continuously listed in this publication.

Part II - Nonfood Compounds Used in the Plant Environment

Part II
List of Nonfood Compounds Used in the Plant Environment

Category Code Letters And Their Meanings

The permissible use for each authorized compound is designated by the following code letters, and conditions for use are restricted by the category in which it is placed.

NOTE: In several categories, reference is made to the need for rinsing with potable water. PAD accepts water used in federally inspected plants as being potable when such certification is made by State health agency authorities.

A. CLEANING COMPOUNDS

A1. Compounds for use as general cleaning agents on all surfaces, or for use with steam or mechanical cleaning devices in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, surfaces must be thoroughly rinsed with potable water.

A2. Compounds for use only in soak tanks or with steam or mechanical cleaning devices in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, all surfaces in the area must be thoroughly rinsed with potable water.

A3. Acid cleaners for use in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, all surfaces in the area must be thoroughly rinsed with potable water.

A4. Floor and wall cleaners for use in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, all surfaces in the area must be thoroughly rinsed with potable water.

A5. Floor and wall cleaners for subfreezing temperatures.

When used in areas with subfreezing temperatures, potable water rinsing is not required following use provided that the solution and solubilized soil are effectively removed by wiping or wet vacuuming.

A6. Scouring cleaners.

Residues resulting from the use of scouring cleaners must be carefully removed from surfaces by thorough rinsing with potable water.

A7. Metal cleaners and polishes for nonfood contact surfaces.

These compounds must be used in a manner so that all odors associated with the compounds are dissipated before food products or packaging materials are re-exposed in the area.

A8. Degreasers or carbon removers for food cooking or smoking equipment, utensils, or other associated surfaces.

Before using these compounds, food products and packaging materials must be removed from the area or carefully protected. After using these compounds, all surfaces must be thoroughly rinsed with potable water. The compounds must be used in a manner so that all odors associated with the compounds are dissipated before food products or packaging materials are re-exposed in the area.

B. COMPOUNDS FOR LAUNDRY USE

B1. Laundry compounds.

Laundry detergents, bleaches, and sours may be used on fabric which contacts meat or poultry products, directly or indirectly, provided that the fabric is thoroughly rinsed with potable water at the end of the laundering operation.

B2. Laundry compounds for uniforms or other fabrics which do not come in direct contact with food products.

C. COMPOUNDS USED IN INEDIBLE AND NONPROCESSING AREAS

C1. Compounds for use on all surfaces in inedible product processing areas, nonprocessing areas, and/or exterior areas.

These compounds must not be used to mask odors resulting from insanitary conditions. They must be used in a manner which prevents penetration of any characteristic odor or fragrance into edible product areas. Compounds containing isomers of dichlorobenzene, or other substances toxic by inhalation, may be used only in areas where there is adequate ventilation to prevent accumulation of hazardous vapors.

Permission for the use of these compounds on loading docks and other similar areas is left to the discretion of the Inspectors in Charge of the plants.

C2. Compounds for use in toilets and/or dressing rooms.

C3. Paint removers for use in nonprocessing areas.

Equipment and utensils which directly contact edible products must be thoroughly cleaned and rinsed with potable water after treatment with such products before being returned to a processing area.

D. ANTIMICROBIAL COMPOUNDS

D1. Antimicrobial agents always requiring a rinse.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, surfaces must be thoroughly rinsed with potable water before operations are resumed. The compounds must always be used at dilutions and according to applicable directions provided on the EPA registered label.

D2. Sanitizers for all surfaces not always requiring a rinse.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. A potable water rinse is not required following use of these compounds for sanitizing previously cleaned hard surfaces provided that the surfaces are adequately drained before contact with food so that little or no residue remains which can adulterate or have a deleterious effect on edible products. These compounds may be used for microbial control on ceilings, floors, and walls at concentrations considerably higher than those allowed for sanitizing food contact surfaces without a potable water rinse unless, in the opinion of the Inspector in Charge, such use may result in contamination of food products. A potable water rinse is required following use of these compounds under conditions other than those stated above. The compounds must always be used at dilutions and according to applicable directions provided on the EPA registered label.

E. EMPLOYEE HAND CARE

E1. Handwashing compounds for use in all departments.

The compounds must be dispensed from adequate dispensers located a sufficient distance from the processing line to prevent accidental product contamination. After the use of the compounds, the hands must be thoroughly rinsed with potable water. Under conditions of use, there can be no odor or fragrance left on the hands.

E2. Handwashing and sanitizing compounds.

The compounds must be dispensed from adequate dispensers located a sufficient distance from the processing line to prevent accidental product contamination. The hands need not be washed prior to the use of the compounds. After the use of the compounds, the hands must be thoroughly rinsed with potable water. The compounds must always be used at dilutions and according to applicable directions provided on the label. The compounds have been accepted on the basis of their equivalency to 50 parts per million chlorine.

E3. Hand sanitizing compounds.

The compounds must be dispensed from adequate dispensers located a sufficient distance from the processing line to prevent accidental product contamination. The hands must be washed and thoroughly rinsed prior to sanitizing with the compound. The compound may be injected directly into the wash and rinse water. The hands need not be rinsed with potable water following the use of the compound. The compounds must always be used at dilutions and according to applicable directions provided on the label. The compounds have been accepted on the basis of their equivalency to 50 parts per million chlorine.

E4. Hand creams, lotions, and cleaners.

The use of such compounds is limited to toilets and dressing rooms. Employees who handle edible products may use the compounds only when leaving the plant.

F. PESTICIDES

F1. Nonresidual pesticides.

These compounds must be used in accordance with the conditions for nonresidual insecticides set forth in Section 8.48 of the Meat and Poultry Inspection Manual.

F2. Residual pesticides.

These compounds must be used in accordance with the conditions for residual insecticides set forth in Section 8.48 of the Meat and Poultry Inspection Manual. They must be used in a manner that prevents their entry into edible product areas through open windows, ventilating systems, etc.

F3. Rodenticides for controlled use only.

Compounds listed in this category are to be used in accordance with the conditions for rodenticides set forth in Section 8.49 of the Meat and Poultry Inspection Manual.

F4. Fumigants for controlled use only.

Compounds listed in this category are to be used in accordance with the conditions for fumigants set forth in Section 8.48 of the Meat and Poultry Inspection Manual.

F5. Fumigants for controlled use only.

Before using these compounds, all edible products and packaging materials must be removed from the room to be fumigated. After fumigation, the treated equipment and space must be thoroughly aerated to remove all vapors before inspectors or employees reenter the area. Food contact surfaces must be rinsed with potable water before edible products are returned to the room. Use of such compounds is not covered in the Meat and Poultry Inspection Manual.

G. WATER TREATMENT COMPOUNDS

Compounds used in such treatment should not remain in the water in concentrations greater than required by good practice. Compounds containing substances which may subsequently result in the adulteration or contamination of meat or poultry products may not be introduced into the system.

G1. General potable water treatment compounds.

G2. Phosphate potable water treatment compounds.

The concentration of phosphates may not exceed 10 parts per million calculated as phosphate ion.

G3. Silicate potable water treatment compounds.

The concentration of silicates may not exceed 10 parts per million calculated as silicon dioxide.

G4. Chlorine potable water treatment compounds.

Chlorine may be present in processing water of meat and poultry plants at concentrations up to 5 parts per million calculated as available chlorine. Chlorine may be present in poultry chiller water, in water for reprocessing poultry carcasses internally contaminated with feces, and in red meat carcass final wash water at concentrations between 20 and 50 parts per million calculated as available chlorine. Chlorine must be dispensed at a constant and uniform level and the method or system must be such that a controlled rate is maintained.

G5. Cooling and retort water treatment compounds.

Chemical agents may be added to water used to cook and cool containers of meat and poultry products to prevent staining of containers and to control corrosion and deposit formation on surfaces of processing equipment. The amount used should be the minimum sufficient for the purpose.

G6. Compounds for treating boilers, steam lines, where the steam produced may contact edible products and/or cooling systems where the treated water may not contact edible products.

In compounds containing volatile amines, the amine in the steam may not exceed the indicated concentration.

Cyclohexylamine	10 ppm	Morpholine	10 ppm
Octadecylamine	3 ppm	Hydrazine	0 ppm
Diethylaminoethanol	15 ppm		

G7. Compounds for treating boilers, steam lines, and/or cooling systems where neither the treated water nor the steam produced may contact edible products. This does not include compounds added to water used to cook and cool containers of meat and poultry products.

H. LUBRICANTS

H1. Lubricants with incidental contact.

These compounds may be used as a lubricant or antirust film on equipment and machine parts in locations in which there is exposure of the lubricated part to edible products. They may also be used as a release agent on gaskets or seals of tank closures. The amount used should be the minimum required to accomplish the desired technical effect on the equipment. If used as an antirust film, the compound must be removed from the equipment surface by washing or wiping as required to leave the surface effectively free of any substance which could be transferred to food being processed.

H2. Lubricants with no contact.

These compounds may be used as a lubricant, release agent, or antirust film on equipment and machine parts or in closed systems (e.g., hydraulic systems) in locations in which there is no possibility of the lubricant or lubricated part contacting edible products.

H3. Soluble oils.

These products are chemically acceptable for application to hooks, trolleys, and similar equipment to clean and prevent rust. Those portions of the equipment that contact edible products must be made clean and free of the mixture before reuse.

J. ABSORBENTS

J1. Absorbents or antislip agents for spot application to floors.

Such compounds may be used in all areas provided that use is limited to the portion of the floor area where the hazard exists, and that such use does not result in dusting, tracking, or other objectionable conditions. Compounds may not be used as a substitute for good sanitation. They must be removed as a part of the routine floor cleaning operation.

K. SOLVENT CLEANERS

K1. Cleaning and/or degreasing solvents for use in nonprocessing areas.

Following the use of these compounds, equipment and utensils must be thoroughly washed and rinsed with potable water before being returned to a processing area.

K2. Solvents for cleaning electronic instruments.

These compounds are chemically acceptable for cleaning electronic instruments and devices which will not tolerate aqueous cleaning solutions. Before using these compounds, food products and packaging materials must be removed from the area or carefully protected. These compounds must be used in a manner so that all odors associated with the compound are dissipated before food products or packaging materials are reexposed in the area.

K3. Adhesives or glue removers.

Before using these compounds, food products and packaging materials must be removed from the area or carefully protected. After using these compounds, all surfaces must be thoroughly washed and rinsed with potable water. These compounds must be used in a manner so that all odors associated with the compound are dissipated before food products or packaging materials are reexposed in the area.

L. SEWER AND DRAIN CLEANERS

L1. Compounds for use in sewage and/or drain lines.

L2. Enzymatic compounds for use in sewage and/or drain lines.

Manufacturers must provide PAD with a record of salmonellae analysis for each lot of the finished enzymatic treatment proposed for sale to federally inspected meat and poultry plants. Testing must be performed by a qualified microbiologist.

P. COMPOUNDS REQUIRING LETTER INDICATING AUTHORIZED USE

P1. Miscellaneous.

Compounds listed in this category are to be used in accordance with the conditions set forth in the letter of acceptance. Copies of the acceptance letter must be supplied to Federal inspectors as proof of the acceptable use(s) of the compound. These letters remain valid as long as the compound is continuously listed in this publication.

Q. COMPOUNDS FOR USE ON SHELL EGGS

Q1. Shell egg cleaning compounds.

Eggs that have been washed with these compounds shall be immediately subjected to a thorough sanitizing rinse or potable water rinse.

Q2. Shell egg destaining compounds.

Eggs that have been destained with these compounds are to be rewashed and spray rinsed with potable water.

Q3. Shell egg sanitizing compounds.

Eggs that have been sanitized with these quaternary ammonium chloride compounds shall be subjected to a thorough potable water rinse only if they are to be immediately broken for use in the manufacture of egg products.

Q4. Shell egg sanitizing compounds.

Eggs that have been sanitized with these chlorine compounds may be broken for use in the manufacture of egg products without a prior potable water rinse.

Q5. Foam control compounds.

These compounds may be used to control foam in egg washing machines. Eggs washed in water containing these compounds shall be immediately subject to a thorough potable water rinse.

Q6. Shell egg sanitizing compounds.

Freshly washed eggs may be sanitized with these iodine compounds only if the eggs are rinsed prior to application of the compound. A subsequent rinse is not required.

LIST OF AUTHORIZED COMPOUNDS
